Problem – Solution Fit Canvas

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why.

Canvas Breakdown

1. Customer Segment & Behavior

- **Target Segment:** Book readers (buyers) wanting format selections, and indie/local vendors seeking a digital store.
- **Behavioral Triggers:** Reading a good book and wishing to log/review progress, searching for local vendor paperbacks.

2. The Customer Problems

1. **Fragmented Ecosystem:** Readers buy books on one platform, track reading logs on another (like Goodreads), and review them elsewhere.
2. **Lack of Vetting:** Buyers get low-quality listings; independent sellers get crowded out by unverified massive distributors.
3. **Rigid Formats:** Buyers cannot easily choose between Paperback and E-Book formats on a clean screen.

3. The Proposed Solution (Fit)

1. **Integrated Interactive Layer:** Built-in "Interaction" model in the MERN backend that stores `readingProgress` (0-100%), `rating`, and `reviewText` per book per user.
2. **Admin Moderation Workflow:** Admin dashboard features user management and seller approval screens. Sellers are set to `isApproved: false` by default and must be approved before listing books.
3. **Flexible Formats & Stock:** Schema-level support for format arrays (`['Paperback', 'E-Book']`) and numeric stock quantities.

4. Verification of Fit

- **Feedback loop:** User reviews immediately appear on the book page via the `/interaction/:bookId` endpoint, updating the collective rating.

- **Operational Validation:** Sellers can edit stock levels and formats via `Editbook.jsx` which immediately changes customer views.
